6				12			

Corn Silage Sampling Protocol

- Collect samples starting 7 days prior to harvest until 5 days after harvest
- Avoid soil contamination of the stalk segment
- Randomly cut and combine fifteen stalk segments for a minimum density of one composite sample per 15 acres
- Split each stalk into 4 quarters by cutting lengthwise
- Discard 3 of the 4 quarters
- Place remaining quarter samples in paper bag
- Ship samples to the lab within 24 hours
- Keep samples cool; do not freeze

Corn Stalk

11/19/14
